注意事项

Notes

- 1. 表中额定总起重量值,是在平整的坚固地面上本起重机能够保证的最大总起重量,包括吊钩和吊具的重量,所以为了估算重物重量,必须减去上述的装置重量。
- 2. 表中的工作幅度为起吊重物离地时起重物到起 重机回转轴线的水平距离,是包括起重臂变形 量在内的实际值,因而起吊前应考虑起重臂变 形量。
- 3. 只允许在5级(瞬时风速14.1m/s,风压 125N/m2)风以下进行作业。
- 4. 吊重前操作者必须对物体的重量和工作范围了解后选择合适的作业工况,严禁超出表中的数值。幅度及臂长在相邻两个数值之间时,应依据两个数值中较小值确定起重作业。
- 应按主臂仰角范围作业,即使是空载,也不应 使主臂仰角处于范围外,谨防整机倾翻。
- 6. 表中的主臂长度应要按照每节臂的伸缩要求进行伸出。

- 1. The total rated loads given in the rated load charts are the maximum lifting capacity when the crane is set up on firm and level ground, which includes the weight of the hook block and slings. The weight of above-mentioned devices should be deducted from the rated lifting load.
- 2. The working radius shown in the rated load charts is the radius when the load is lifted off the ground, and it is the actual value including loaded boom deflection. Take boom deflection into consideration before beginning a lifting operation.
- 3. A lifting operation is permissible only when the wind force is below grade 5 (instantaneous wind speed is 14.1 m/s, wind pressure is 125 N/m2).
- 4. Before beginning lifting operation, the operator should know the weight of the load to be lifted and its working range, and then select proper working conditions. Never operate the crane beyond the limit shown in the chart. Use the lower value from the chart when the boom length or working radius is between the range of values.
- 5. Observe the boom angle limit. Never operate the crane with the boom angle beyond the recommended limit even if a load is not being carried. Otherwise, the crane will tip.
- 6. The boom should be extended according to the telescoping code shown by digits, which means the percentage of boom sections extended.
